

Attached population: fast response and kinetic relaxation

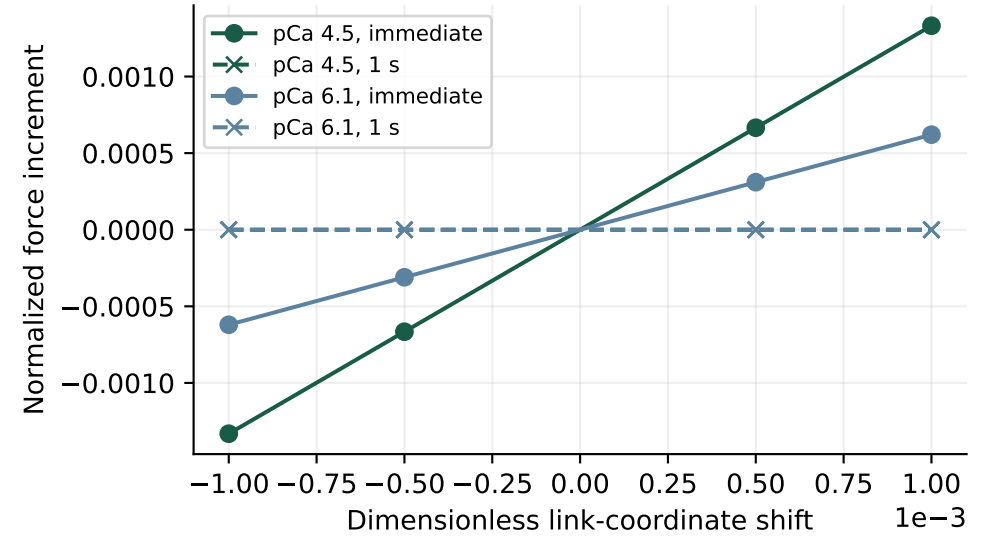

Nonhuman, fixed-capacity equation fixture • direct contractile-coordinate clamp

144 cases • two extents • three bin widths • three timesteps • fixed 1 s horizon

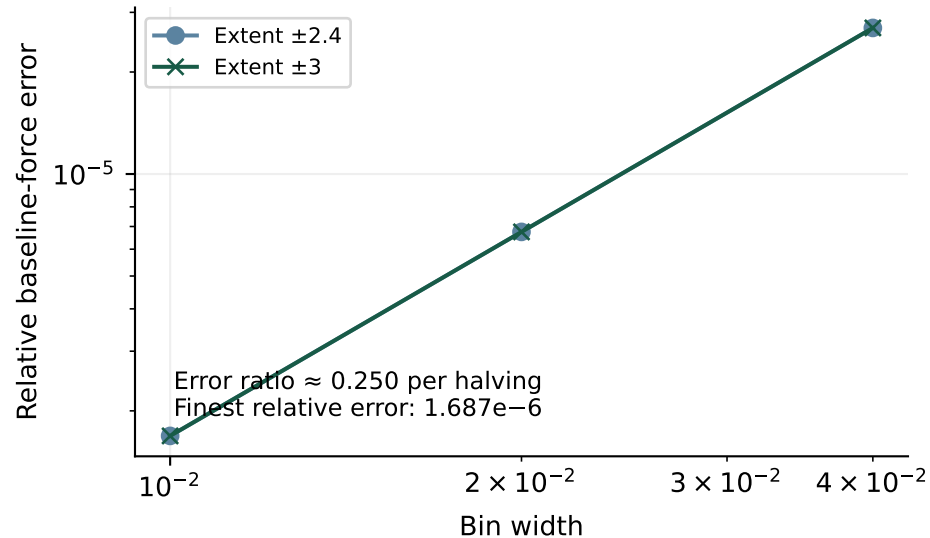

Matched-time relaxation after +0.001 shift

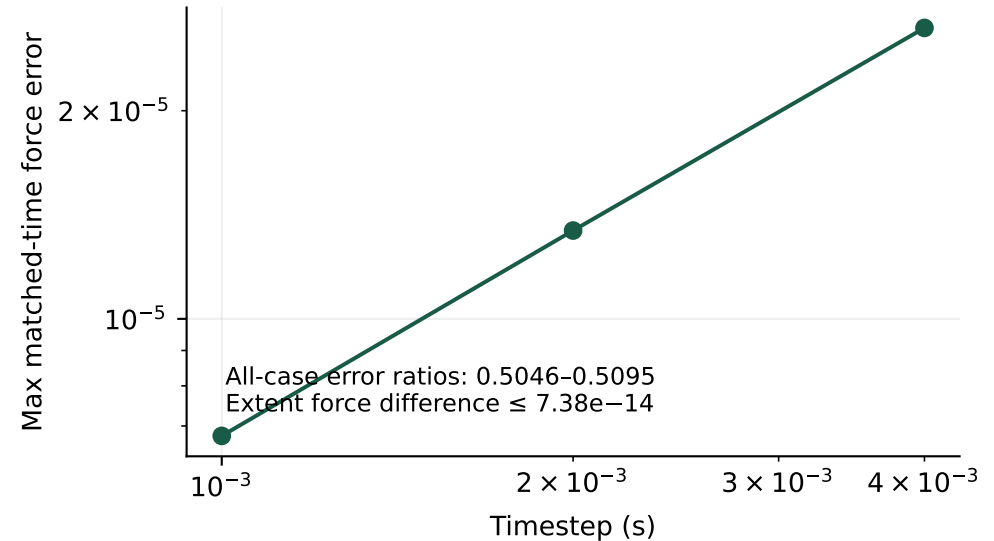

Immediate and relaxed increments differ

Spatial equilibrium error against quadrature

Temporal error against exact finite generator

Same-input relaxed force is unchanged by construction. No descending-branch, human, series-history or arm qualification.
